

## F. Morat México

### Contract Assembly at high quality & low costs.

Are you looking for alternative measures to sustainably improve your competitiveness in the field of assembly projects? Do you aim to bring the complexity of your processes down to a minimum, while focusing on your core capabilities and keeping costs to a minimum and increasing flexibility? Then we're the right fit for you!

Have we sparked your interest? We will gladly send you a quote in almost no time at all. We are looking forward to receiving your inquiries and your exciting projects!

#### ✓ Reduce costs

Reduce your personnel costs significantly by outsourcing your assembly projects to our modern production facility in Lerma, México. We further minimize costs and add value by reducing steps in the supply chain. We keep delivery charges down to a minimum by assembling manufactured pieces into a complete component or even an assembled product.

#### ✓ Increase your capacity

Our team of skilled workers will pull out all the stops to ensure your project can be implemented on short notice. You overcome capacity bottlenecks and increase your productivity by focusing on your core business. Simply send us your components, and we'll assemble parts and ship them to you, labelled and ready to go straight to production. Your line has never been more efficient!

#### ✓ Improve quality

If you combine contract assembly with quality inspection, your production line gains top-tier efficiency and quality, while improving profitability. Our goal is to deliver 100% accurate parts and products. Traceable, product-specific intermediate and final inspections as well as certified quality testing ensures the reliability of all assemblies.

#### ✓ Benefit from many years of experience

There is no substitute for experience! Whether partially assembled components or complete units - you benefit from the expertise we have gained from numerous assembly projects for automotive, heavy machinery, agriculture, intralogistics, medical device technology and many other industries.

# We are your experienced partner for assembly projects.

The Franz Morat Group has been at home in the world of gear and drive engineering for over 100 years. Our customers value us as experienced development partners for innovative drive systems, which we support from the specification phase to series production.

In our production plant founded in 2015 in Lerma, México, we offer you a modern infrastructure and qualified employees for your assembly tasks on 2.900 m<sup>2</sup> production and assembly area.

Our portfolio of drive solutions includes partially assembled components, standardized modular gearbox components and ready-to-use complete drives including a motor and control system. We use a wide variety of machining processes, product- and process-oriented tests as well as testing methods during assembly. This enables us to produce and assemble drive solutions that perform their reliable services in a variety of industries. Here are just a few:

## Drives for curved stair lifts

The stair lift drive consists of a total of three individual drives: the main drive for the up and down movement, the swivel drive for the seat as well as the drive system for tilt correction.

## Control valve drive

This plastic component controls induction devices and radiators. 15 different variants that are distinguished by lifting force and actuating power are manufactured from over 20 individual parts.

## Planetary gears

We are also a competent partner for the assembly of standardized drive solutions. Based on the modular principle, planetary gears are assembled according to desired specifications.

## Two-component mixing device for dental technology

This drive meters and mixes two viscous, paste-like substances at the push of a button. The drive consists of a total of 132 different individual parts—made of both metal and plastic.

## Drives for caravan maneuvering systems

Maximum precision, durability and reliability are demanded when maneuvering caravans. For this purpose, the three-stage spur wheel drives undergo meticulous tests before delivery.

## Control valve drive

These customer-specific drives activate control valves in long-distance heating pipe networks. We manufacture over 100 versions for different travels, actuating power, speed or operating voltages.
